

Boot 2010: Webasto presents new Marine water stations

Webasto water station available in five power settings from 11.6 kW to 35 kW

Stockdorf/Munich – 16 December 2009 – At the ‘boot’ trade fair, which will be held in Düsseldorf, Germany in 2010, Webasto will be presenting its new Marine water stations to a German audience for the first time. The new product will be on show at the joint exhibition booth of Bukh-Bremen (Hall 10, G 59.4). As well as the new Marine water stations, from 23 until 31 January 2010 Webasto will also be introducing an interested specialist audience to its entire product range of air heaters and air conditioners, down to integrated system solutions for heating and air conditioning.

Water stations to fulfill every requirement

The new diesel-powered stations from Webasto heat the boat’s interior and the tap water on board and are available in four different versions with five power settings. The integrated hot water reservoir ensures that warm water is available within a short amount of time. The four versions of water station (central heating, central heating with warm water boiler, central heating with integrated plate heat exchanger and central heating for air conditioning integration) are available in capacities from 11.6 to 35 kW (11.6 kW, 16 kW, 23 kW, 30 kW, 35 kW). This range of models ensures that different boat sizes and models can be ideally supplied with warm water and heated air. The water stations operate quietly, can be operated independently from the ship’s generator with a 12 V or 24 V battery and are particularly compact in all power settings and versions. With a standard size of 800x520x270 millimeters they require very little installation space on board.

The complete comfort product range from Webasto

Webasto will also be exhibiting its reliable heating systems at the ‘boot’ fair in Düsseldorf. Amongst other series, the compact and lightweight Air Top Evo series will be shown. With their continuously variable heat regulation, these efficient air heating systems consume a lot less of the valuable electric energy on board. Furthermore, the BlueHeat water heaters, BlueCool Chiller air conditioners for yachts and super yachts and the BlueComfort integrated system solutions will also be on show at the trade fair.
